EDITORIAL GREETINGS

Ilham Akhsanul Ridlo
Editorial Board Member

This is the second English edition of Indonesian Journal of Health Administration (JAKI). At the same time, it has started a pioneering effort as a scientific journal that has pre-print policies in Indonesia. Pre-Print is a version of scientific papers that precedes formal peer reviews and publications in scientific journals. Pre-Prints allow authors and research to make publications as early as possible and to be immediately known and gain public control before entering our scientific journal review system. Also, the Indonesian Journal of Health Administration commemorated the open access week from October 21st to November 7th, 2019, and we remain steadfast as an Open Access Journal. For current

information, the average visits to our Open Journal System page are 227.1 per day and 82.6 new visitors per day (Data on 4th November 2019). The effort does not mean anything. As a journal that specifically addresses health administration, it is important for us to increase access for readers. Maintaining the trust of the authors to collaborate in spreading health administration knowledge in Indonesia is also our concern. We have made this effort by creating several social media channels to increase engagement with our readers. These social media include Twitter, Facebook, and Medium. The three channels routinely report on studies and activities in the Indonesian Journal of Health Administration. We also aim for new indexers to widen the spread of open-access knowledge.

This edition, we invite readers to discuss several topics in our scope, namely healthcare administration, healthcare leadership, and health policy. Hospitals are currently developing to follow the concept of modern management. In the context of the era of National Health Insurance, service improvement is correlated with cost efficiency efforts. An organization must identify and plan training for staffs on a regular basis, prepare job descriptions appropriately, and conduct performance evaluations based on the job descriptions that have been prepared. Prastiti Swesti Komala Dewi, Christyana Sandra, and Eri Witcahyo explained the allocation of resources in the preparation of clinical pathways at Kaliwates General Hospital for typhoid fever cases.

The problem of prescribing generic drugs is one of the constraints in service in the era of National Health Insurance as Isna Rahmawati and Alief Dyaningayu Savitri explained by encouraging increased supervision of the use of generic drugs for hospital services. Efficiency and effectiveness of supporting services for Radiotherapy are also the topic in this edition. Evaluations of utilization of LINAC with an economic approach are needed to calculate the investment cost of the equipment. The LINAC method was explained by Feliana Mirnawati, Sutopo Patria Jati, Johannes Sugiarto. It was potentially used as a tool for evaluating the effectiveness and efficiency of radiotherapy devices. This effort helps hospitals run cost control.

In the healthcare leadership topic, we pointed out that the intensity of organizational culture is a factor that affects employee job satisfaction. The study of organizational culture was discussed by Prasiska Ramadyaning Utami and E. Maria Kristine

Sitohang. In addition, several types of organizational cultures related to work culture were examined by looking at employee's perceptions. Diajeng Puspa Arum Maharani and Firda Nadia Roshandi stated that there is a relationship between a certain organizational culture and job satisfaction. Deby Indah Permatasari and Anneke Meyvia Silvi examined how a good working environment can be formed by improving the salary system and the social environment.

Moreover, we also present studies of other health services. One of them is a study of the strategic plan carried out by the health service supervisors as discussed by Fiany Dharyanti. In the context of the National Health Insurance (JKN), we present the relationship between the factors of demand and utilization of health services for participants receiving Contribution Beneficiary (PBI). Leli Rachmawati and Isma Faridatus Sholihah concluded in their article that the most determining factor in the utilization of health services is the time of service and special segmentation of patient services based on age groups. Some of the spectrum of research that we present in this journal also discusses the process of redesigning the role of supervisors in taking drugs for Tuberculosis patients in Indonesia, Determinant Analysis of Maternal Participation in Pregnant Mothers Classes and Urban-Rural Disparities: Utilization of Primary Healthcare Centers by Elderly discussed comprehensively by Ratna Dwi Wulandari and Agung Dwi Laksono. They used raw data of Basic Health Research (Riskesmas). The results of the study indicate a disparity in the outpatient category between urban and rural areas in the utilization of primary healthcare centers by the elderly in East Java.

We hope that what we have presented to our readers can strengthen the evidence-based policy. We humbly and sincerely ask for advice and criticism for this journal management so that knowledge will be accessible and useful for everyone. Stay Cultivate, Collaborate and Connect!

Surabaya, 20th October 2019

Ilham Akhsanu Ridlo,
Editorial Board Member.

GUIDELINE FOR AUTHOR

JURNAL ADMINISTRASI KESEHATAN INDONESIA (JAKI)

Jurnal Administrasi Kesehatan Indonesia (JAKI)/Indonesian Journal of Health Administration receives scientific works in the form of ORIGINAL ARTICLES, COMMENTARY, LITERATURE REVIEW, and LETTER TO EDITOR. The manuscript must be original and unpublished. If the manuscript is accepted for publication in JAKI, the submission of the manuscript shall not be permitted to publish the manuscript to other media.

The manuscript is typed on A4 size A-size HVS paper with 1 spaced space on 1 side (not back and forth) with approximately 7000-8000 words for original article, 2000-3000 for commentary, 7000-8000 for literature review, and 700 words for letter to editor. The font type used is Arial size 9 pt. Margin or border of writing from the edge of the paper 2.5 cm in all four sides. The script is typed in (2) two columns. You are not allowed to use footnote. The manuscript file is sent in MS Word format. The manuscript is written in English with Peffective and academic language. All incoming scientific articles will be judged by the editor-in-chief appointed by the editors.

The following are the types of manuscripts in the Indonesian Journal of Health Administration:

- A. Original Article** is a type of manuscript that presents data from research. It consists of Introduction, Method, Results and Discussion, Conclusion, References.
- B. Commentary** is a comment that critically addresses an issue of an article published in Indonesian Journal of Health Administration. It draws attention on the current issues and presume the future direction of a topic. Commentary is written using original data and stating personal opinion.
- C. Literature Review** explains a comprehensive summary of studies in specific topics, insights on the stance of the field and the orientation of the reviews presented. This type commonly cites lots of primary research articles in the field.
- D. Letter to Editor** is a response or opinion from readers about a current issue that attracts public attention. It encourages other readers to respond the other way around.

All references are managed using Mendeley software. The references are at least published 5 years back for journals and 10 years back for books. Every article should fulfill above guidelines and adjust to the journal's template before submitted to the Indonesian Journal of Health Administration. Further details about the organization of each types of manuscript can be accessed on <https://e-journal.unair.ac.id/JAKI/pages/view/GFA>.
