## **AUTHORS' GUIDELINES**

Journal of Basic Medical Veterinary (JBMV) is a journal that contains topics across veterinary basic medical sciences by the Department of Basic Medical Veterinary of Veterinary Medicine Universitas Airlangga published periodically two times a year (June and December). JBMV received manuscripts in the form of original research articles, review articles, and case reports in Indonesian and English. Manuscripts received must be original, current, and have never been published or are being planned to be published in other scientific journals.

Manuscripts must be submitted online through the Open Journal System (OJS) in Word format. The entire text is typed in Times New Roman 12pt double spaced, using line numbers. The title is written with a Sentence case capitalisation (bold, 14pt, centered). The full length of the manuscripts is a maximum of 14 pages of A4 paper with a top margin of 2.2 cm, other margins of 2 cm, and consecutive page numbers. Italicise only for species names or terms that have not been standardised as Indonesian. Define abbreviations upon first appearance in the text. Do not use non-standard abbreviations unless they appear at least three times in the text. Keep abbreviations to a minimum. Avoid unnecessary duplication of text.

### **ORIGINAL ARTICLES**

The first page contains full names of all authors without titles and initials (bold, centered), followed by the name and complete address of the respective institution (marked with numeric superscripts) and e-mail of corresponding authors (marked with \*superscript), approval of ethical commission, and acknowledgements if applicable.

The second page forward contains type of article (ORIGINAL ARTICLE, REVIEW ARTICLE, or CASE REPORT), title, abstract and keywords in English and Indonesian, followed by introduction, materials and methods, results, discussion, conclusions, and references

Title should be concise but informative, as far as possible, in no more than 12 words.

Abstract written in Indonesian and English, do not exceed 250 words, containing elements of background, material and methods, results, and conclusions.

Keywords maximum of 6 (six) words or phrases, written after the abstract in each language, alphabetically ordered. As far as possible, avoid using keywords from the title.

Introduction should be brief, containing elements of background, problems, objectives, and reference sources that support.

Research materials (materials and equipment) do not need to be mentioned separately, but rather integrated into the method used, complete with the brand and catalog number if applicable. Do not include common supplies, such as test tubes, pipette tips, beakers, etc. or standard laboratory equipment. The name and address of the laboratories need not be mentioned.

Method must be concise but sufficiently detailed (with reference or modification), so other researchers can repeat research.

Results are displayed in a concise but clear narrative with/without tables or figures.

Tables are made without vertical lines (use only lines at the top and bottom of the table as well as for separating heading from the main table), with table title placed before the table, numbered in Arabic numerals (Table X), and have to be referred in the text. The description of the table is placed after the table; it must be concise but clear enough so that the table separately can be understood without referring to the text. The table, along with the title and description, are placed after the References.

Figures presented are only those that support the findings of the study, and not a restatement of data from tables in the form of figures. When resulted data in the form of figure is more informative, interesting, or significant, presentation of data in table form is not required. Figure title is placed after the figure, numbered in Arabic numerals (Figure Y), and has to be referred in the text. The description of the figure is placed under the title of the figure; it must be concise but clear enough so that the figure separately can be understood without referring to the text. Image (in JPEG format) is sent in a separate file. The title and description of the figure are placed after the References.

Discussion contains the explanation of what is found related to the importance of your study and how it may be able to answer the research question, comparison of results (internally, between research data, and externally, compared with findings from other studies), and cause-effect analysis.

Conclusion does not only repeat the results of the study, but summarise the findings into a narrative that impacts on the development of science and/or practitioners in the field of veterinary reproduction.

Approval of Ethical Commission has to be stated (number and institution) if the manuscript is constructed based on research using live animals.

Acknowledgements are delivered to the research funders (state the name, number, and recipient name of the grant, if applicable) and to those who have helped carry out the research.

References are sorted alphabetically based on the author's last name. The titles of journals should be abbreviated according to the style used by each journal. Twenty five (25) % of the references have to be from the last ten years.

## REVIEW ARTICLES

Review articles are usually invited, but authors may contact the editors to propose the review. The review should be on the topics included in the scope of the journal which are of current interest, and must comprise a comprehensive analysis and perspective on the state of the field and where it is heading. Reviews will be subject to the same peer review process as is applied for original papers. The manuscript is arranged in the same way as the original article with an unstructured Abstract (in English and Indonesian, maximum of 250 words), Introduction, Acknowledgements (if there is any), and References. The number of references is limited to 50-70, with 75% of them have to be from the last ten years. The total length should not exceed 20 pages (A4 paper, double spaced 12pt Times New Roman, top margin of 2.2 cm, other margins of 2 cm).

## CASE REPORTS

JBMV received novel, important and impactful case reports with topics included in the scope of this journal. Case reports should provide a significant learning point for other veterinarians or scientists. All reports are peer reviewed by colleagues. The manuscript arrangement is the same as for the original articles, with Abstract (in English and Indonesian, maximum of 250 words), Introduction, and References as the core sections. The number of references is unlimited, with ten of them from the last ten years, and three of them from the last five years.

# Table of Contents

## **Original Research**

---

### **The Effect of Giving Pork Oil and Egg Yolk as Components of a High Fat Diet on The Hematological and Cholesterol Profiles of Mice (*Mus musculus*)**

Anissa Dhea Larasati , Rashya Jasmine Allailah , Dea Dwyna Syachfitri , Mocca Cintaura Radya Safania , Revira Yunita Rachmania , Dewa Drio Putra Wardhana , Aliyya Lintang Gustiko , Abdullah Umar Al Faruq

1-8

### **The Effect of Red Ginger Extract (*Zingiber officinale var rubrum*) on The Thickness of The Epitelial and Diameter of Seminiferous Tubules in Albino Rat (*Rattus norvegicus*) Exposed Monosodium Glutamat**

Nogi Renaldi , Kadek Rachmawati , Thomas Valentinus Widiyatno , Sri Pantja Madyawati , Yeni Dhamayanti

9-15

### **Differences in Blood Glucose Levels of Rats (*Rattus norvegicus*) Given Sugar Cane Juice and Cyclamate Solution as a Sweetener**

Virginia Ayu Kinanti , Melynda Veronika Kartjito , Inas Zhafira , Anastasia Josephine Saputra , Rahma Alfiana , Aldena Aulia Pramesti Harnowo , Rafael Azkal Vellano , Zulfa Fajrina Handini , Nadia Puteri Amrullah

16-22

### **The Potency of Antidiabetic of Psidium guajava Fruit Extract Against Streptozotocin-induced Type 2 Diabetic Rats**

Safira Salsabila Citagami , Saninah Candrawati Ruliff

23-30

### **Protective Effects of Thymoquinone on Endothelial Cell Dysfunction in Hypercholesterolemia**

Giftania Wardani

31-37

### **Isolation and Identification of Bacterial Biosurfactant Activity from Mangrove Sediments**

Rahmi Sugihartuti , Munawer Pradana , Lilik Maslachah , Sri Chusniati , Wiwiek Tyaningsih , Dadik Rahardjo , Soeharsono Soeharsono

38-48
