# EDITORIAL NOTED

Mental health is a very important aspect which could not be separated from human life. The World Health Organization in its constitution defines health as a state of physical, mental, and social well-being, and not merely the absence of disease or disability. Mental health is a holistic part of health that is often neglected when physicians treat their patients. Therefore, an understanding of psychiatry is very important for practitioners and should not be forgotten. The Surabaya Psychiatry Journal or Jurnal Psikiatri Surabaya (JPS) presents aspects of Mental Health, Neuroscience, and Psychiatry that could contribute to the advancement of medical science, both theoretically and practically. This journal is packed with various cases, reviews, and research progress in the field of psychiatry which also involves cross-disciplinary authors/researchers. We hope that this journal will be able to fulfill the achievement of Sustainable Development Goals (SDGs) by improving people's mental health in the future.

best Regards,

**EDITORIAL TEAM OF JPS**

# TABLE OF CONTENT
